Path To Success

Since our industry faces new challenges every day, we would like to invite you to review our “Path to Success” consider joining the ranks of many business leaders who believe in change have introduced their business information vision to our Analysts of Business and information technology. As our motto is “Implement the new idea as it is hot with pure professionalism”. The time is now, and we are committed to do this for you.

The Goal

The industry of information technology, particularly for a developing country is a major force for the improvement of the quality of life. Through innovative and responsible application of its energies, skills, expertise and ideas it can make a positive contribution to the very fabric of the people it serves. Random House being a part of information technology industry has a mission to play a vital role in national development of the country. Random House aspires to contribute to the quality of life of the people it serves. It believes that by creating a strong presence in the market place and seeking to maintain a sustained record of growth in its business. Random House will be able to demonstrate leadership in setting standards of excellence in Pakistan. Through achievements of these goals, Random House aspires to bring ‘Quality Of Life’ and enhance the well being of its clients, employees and the communities which it serve and operates within. Random House looks to playing a significant role in the country’s development towards the challenges that are to be met in the coming years. We have committed itself to provide the highest quality services, tools and expertise available to successfully run and optimize your management information process. Our positive interaction with customer converts our working in partnership with you to guarantee complete satisfaction, self-sufficiency and success.

Over View

For many years, companies have created application systems to capture and store corporate information. When users need to report or make business decisions based on this information, they often find that getting at this corporate data is difficult. Corporations need access to the information contained in their systems to stay competitive in today’s market. At it’s basic core we, are about users having easy access to this data.

With the experience of business world we fulfill the needs of business and software, we assist clients in implementing the software applications like financial software, inventory management, sales and service management software.

We are is a firm specializing in providing a full solution to clients wanting to implement a Business Intelligent solution within their company. We provide the business application client server technology based software consulting and ISO services necessary for successful implementation and deployment. We are a highly successful firm specializing in the Business Intelligence Products. We cover the financial aspects, stock management, Tax Consolation ISO certified and other services, which are required by clients.

We are unique among consulting firms in that we are focus on our in house developed products. This gives us an advantage over other consulting firms because of our expert level of experience. We also provide other consultancies like ISO services, Tax consolations, and web development.

We determine to insure that clients get the most value out of our solutions by offering superior consulting, training and implementation services as well as the business intelligence software to support these efforts.

Our Culture

We have encouraged a dynamic entrepreneurial culture from within which our services are delivered. Our team course of action is based on our belief that the power of our people – our most precious asset. Customers expect partnership to be converted in long-term relationship with us even though we strive to make you self-sufficient.

We believe in “*customer satisfaction through professional services*”. We design and implement the reporting applications as we design and implement applications that capture and store data – possibly to a grater extent because now business analysts will make a business decision based on these reports. We also design and create procedures and information flows to manage the activities in a simpler and professional way. It is also imperative that the implementation of this application is done in a timely and cost efficient manner. We have helped many clients implement and deploy reporting solutions based on the latest tools like Microsoft Development Platform and Macromedia for designing.

Most Valuable Assets of Random House

Customer:	Our success is depending upon customer's success
Effort:	The Team is main strength of any organization, which we have.
Veracity:	The Commitments come first.
Knowledge:	A successful man is always a good learner.
Thrive To Grow:	Our attitude makes the difference. We absorb the changes.
Distinction:	We do what others think to do.

The Organization

We have organized its capabilities on the basis of skills and expertise in following:

- Software House
- Management Consultancies
- Product Sales
- Systems Support Services

We believe in total independency and integration these units are completely independent and also can be integrated together to fulfill the requirement of any project. We appreciate the uniqueness and individuality of your requirement and understand that the proper management of the information flow is the most critical factor in insuring our escort and competitiveness. Our business units adhere religiously to requirement-focused approach towards system development. Together these business units enable us to be the *total IT* solution providers.

Software House – Where we take pride in our highly qualified and capable team supported by our vast pool of workstations. Our team has developed and implemented applications and systems innumerable tools for various platforms.

Management Consultancies - During our tenure of working we worked with a lot of organizations like we have been involved in textile sector including spinning, weaving, knitting, dyeing and gray cloth third part processing, pharmaceutical industry, general trading, sale

successfully. These systems are running accurately in their environment and producing the results, as management needs.

One aspect we bring is the ability to assist our clients in implementing these solutions with our application. We understand that there need to be customization of the application and that this customization will extend to the reporting solution as well. We add a level of expertise to your staff so they can concentrate on their job. We will work with your staff to create, integrate, implement and deploy the solution.

We have taken this Knowledge of integration to other organizations as well. We have worked with companies to provide ISO services throughout the Pakistan.

We provide different services like:

- System analysis and design
- GAP Analysis
- Business Process Re-Engineering
- Analysis to Improve Existing Systems
- Customized client server ethnology based software development
- Web site development
- Graphic Designing
- ISO certifications & Revision

Product Sales- Where we design and implement multi-vendor based solutions for matching customer's requirements with its resources.

System Support Services- Where we provide comprehensive technical support, facilities management services for running IT system.

Our Objective

We have an aim for our customers in

- Time line management is one of our keys to success in developing software systems and applications and at highly competitive prices. Our professional team upholds this aim by emphasizing strong project management skills in their working.
- Quality assurance routines are predefined for definitive compliance with system specifications and standards.
- Developing quality manpower resources by continuous training and exposure to latest technology.

The Potency

Our most valuable potential asset is our team. We have the distinction of delivering quality software systems to a number of reputed clients in Pakistan. At every instance our team has developed and implemented systems that endorse its technical capabilities and professionalism.

This highly trained manpower resource supported by latest infrastructure, equips us with just the right set of capabilities and resources for taking on projects of considerable complexity and magnitude. To our credit, we have the distinction of delivering IT solutions for a number of local clients.

Some of our strengths as software developers are:

- Expertise in developing software solutions in a wide spectrum of tools
- A management and technical staff holding MCS, Masters and BCS degrees from prestigious institutions.
- Ability to comprehend customer needs/specifications and develop systems accordingly
- Ability to make timely deliveries in the most cost-effective manner
- Extensive experience of installing and maintaining various types of data networks.
- Strong understanding of data communication
- Dynamism with strong emphasis on staying abreast with all latest technologies and tools
- Through understanding and expertise in the other elements of IT, i.e. hardware and communications

Services

We have worked over the years to develop itself primarily in the domains of database design and development, customized business application development, Data Communication application (Interface with PABX). In light of this development we offer to its customers a service range which focus on developing better and more efficient management system.

Currently we are providing the following services

Customized Business Application Development

With the increasing complexities and scope of business today, there comes a time when off-the-shelf software products are not suitable for addressing the information needs of an organization. That is where we come into the picture.

Besides having hands on experience in major platforms and industry standard operating systems, we develop a system in

- The upcoming fifth generation object oriented development tools such as Visual C++ and Visual Basic

The differentiation in the system that we develop lies in our highly parametric approach, which allows the customer to configure the system in compliance with their most recent business standards.

Process Re-Engineering

In today's world of changing business requirements, any growing organization needs business process modification every now and then. With technology evolving at rapid, pace older systems are not able to provide the required functionality for changing business needs in this scenario. It becomes imperative for an organization to re-engineer its existing system.

We provide process re-engineering services for such clients. These services include:

- Re-engineering of applications
- Rightsizing of systems
- Enhancements of existing Client / Server environment

Industries We Cover

We take pleasure in its handpicked team that has highly qualified professionals with diverse experiences and backgrounds. Our objective has been to develop an expertise pool that not only understands the technology but also has first hand knowledge of business processes involved in various sectors.

Some of the specific areas where we hold extensive hands-on experience are

- Integrated services management and billing system for call centers
- Systems for financial management, planning, monitoring and control
- System for inventory management, planning, procurement and monitoring
- Human resources management system

Principles

We adhere to the following design principles in any software development:

Modular Programming – Structured programming technique is adopted in our applications to ensure convenience in support, maintenance and enhancement of a system.

Program Testing – Testing is the key to success of any system. Any System, which we develop, is put to meticulous testing and quality control checks. The testing is carried out for programming modules and the system as a whole.

User Friendly System Design – The emphasis is laid on making the system user friendly and guiding the user at every stage of operation with self-explanatory menus. Latest GUI-based development tools are used in order to activate various processes.

Extensive help facility is one of the main considerations in our system design. Help facilities are incorporated at all stages of operations where they are likely to be needed.

Security / Safety – In order to ensure the security and integrity of system and data, ample provision are made in the system design. Access to data / screen is provided only to authorized users.

The procedures are laid down, clearly spelling out the operational processes to be carried out in order to ensure that the integrity of data is maintained at all times.

The back up procedures are proposed so that information is restored as soon as possible in case of unforeseen catastrophes.

Open Architecture / Transportability – Computer solutions limited to proprietary tools / platforms are likely to constrain subsequent growth and transportability of the system. We, design open architecture / unbiased solutions with maximum future-capability.

All out software development work is uncompromisingly supported by:

- Extensive documentation
- Comprehensive training programs for the customer
- After sales support

Improving the Business Process

Having provided information management solutions to many of business, our project managers and senior consultants possess the expertise to perform a detailed analysis of the information systems currently in place within your organization. Analysis services include technology utilization review, information process flow analysis, system implementation feasibility studies, cost/benefit analysis, system design requirements and requirements document preparation. Our *Business Process Analysis report* – presented in a unique report format – provides a detailed blueprint of the process required to design your successful information management system. To meet your needs we offer a complete suite of Business Process Analysis Solution.

In Depth Analysis Of Business

The complete BPA solution is a comprehensive approach to analyzing all business processes and qualifying improvement potential within your organization. After examining the processes within your business, such as product development, order processing and fulfillment, global procurement, and human resources management, our analysts identify activities comprising each process and obtain an in-depth, quantifiable understanding of their value through the eyes of the process customer.

The results of the evaluation is a Business Process Analysis Report which documents precisely how cost-effective information technology tools could be strategically implemented to obtain the improvement potential for the organization. In addition, we provide the detailed functional

specifications of your company's next generation of information management system. All staff feedback and management concerns uncovered during the evaluation are documented in the BPA report. This deliverable can then be used as a blueprint for all future information technology project direction.

What is required?

Our Requirements Analysis identifies all business system requirements in detail as well as the resources required to implement them. Similar to the Complete Business Analysis in breadth and depth, this type of analysis provides a complete system definition, which can be used to evaluate various solution alternatives, but does not address process improvements or cost justification.

Implementing The Designed And Analyzed System

Our Implementation Design Analysis reviews the existing organization procedures and system operation in detail and compares these methods to the standard feature set of a specific off-the-shelf financial and/or operations management software applications. The result of this comparison is a detailed documentation of the "Gap," i.e. missing functionality, in the standard software applications as it pertains to how your company desires to do business.

Once this review is performed and the results documented, educated decisions can then be made as to the final configuration of an information management system based on the software applications reviewed in the analysis. This document will serve as the blueprint of your company's database information system functionality prioritization process, enhancement design, enhancement development and implementation.

IT Assessment

Our Information Technology Assessment is an abbreviated engagement, which provides an overview of how your company is utilizing information technology to conduct business and gain insight into how information flows can be improved within your business.

Developing Data Bank

WE offer complete database software design, development, implementation, documentation, and training services to create a custom database application that meets your unique business requirements. Our expertise with a variety of industry-standard Windows database/development environment such as Microsoft, Visual FoxPro, Visual Basic, Microsoft Access, Microsoft SQL Server allows us to incorporate easy-to-use graphical interfaces and ensure your custom system emulates existing business procedures, associated data collection forms and reports.

Taking advantage of innovative development processes including rapid application development (RAD) as well as the more traditional phased life cycle methodology, we strive to empower you with complete control of your application development tools including graphical CASE tools, application generators, report writers, technical documentation utilities, and version control utilities to ensure the largest return on your investment.

Reviewing the Existing System

We have extensive experience in the today's leading application development environments opens up the opportunity to enhance existing applications or to integrate new database applications with existing software. Modification of existing database applications allows you to maintain your investments in past software development activities if you already have an existing system and would like to receive an expert recommendation as to benefit of modifying existing applications vs. redirecting the same investment towards new technology, we offer an initial "discovery" service which measures the costs and benefits of both directions.

ISO / QS 9000 Information System Certification Assistance

We Analyze and identify which ISO/QS 9000 requirements are missing from your business information management processes and can provide solutions as to how your company's information system can confirm to ISO/QS 9000 requirements.

Quality Management At Work

Our documentation standards are both thorough and consistent. Revision control and ISO complaint formatting standards provide customers with deliverables that are clear, concise and organized.

Quality Assurance Department

We have applied this focus to the process of manufacturing new software applications and the modification of existing applications by formatting our quality assurance (QA) team has the responsibility of managing the activities associated with the testing and debugging of all software applications developed and software modifications completed by the our development team. We have implemented a clear four-point mission statement, which serves as a guide for all application development services.

- *Deliver software applications and modifications with zero defects.*
- *Ensure the development team's commitment to high quality.*
- *Continuously expand and encourage attention to detail.*
- *Measure, analyze and improve all quality efforts.*

We continuously focus on these factors by constantly tracking quality measurements throughout the development process. Our Project integrator database management system maintains current and historical data on a real-time basis as to number, types, and severity of defects found and corrected during the development phase. This information has led to the creation of our standard testing procedures as well as a scientific approach to unit and system testing. Our investment in quality, though an integral part of the design and development services offered, has been optimized due to our Quality Assurance Team's ability to significantly reduce rework and continuously improve the level of quality in our products and services.

Our Team

The entire company's staff is dedicated to the level of excellence required to professionally and cost-effectively design, develop, implement and support information management solutions of any magnitude. Our staff consists of professionals who have extensive experience in the methodology of today's information management environments and is focused on customer interaction and satisfaction. Every staff professional is committed to effective customer interaction ensuring the highest level of trust and reliability in their efforts to satisfy your every need. A brief summary of our technical staff follows, as our experts and knowledge base are what keeps us on the leading edge of technology and provides our competitive advantage.

Business System Analysis Team

Our Business Analysts have a vast experience in the information management and financial fields. Our experience involves a variety of industries with a focus on manufacturing, distribution and service organizations. The knowledge base of our Business System Analysis spans all stages of the project life cycle: from analysis to design to development to implementation to operation. With our Business System Analysis experience and knowledge base, we are able to provide customer with a full range of services including our Business Process Analysis, and integrated financial, distribution and production system implementation services.

Project Management Team

Our project managers have worked in so many areas of operational analysis, software design, systems development, data modeling and implementation experience in client / server environments. Project Managers have been trained in the use of today's project management tools and techniques including the critical path method and distributed project management. Our experience covers an array of industries including manufacturing and financial industries. Project Managers also have significant exposure to the use of a variety of operating systems and applications.

Quality Assurance Team

Our Quality Assurance Team has been testing and debugging software applications under the lights of latest QC procedures introduced in Quality control. To ensure standards our customers receive the best quality software application designed specifically for their organization. Their experience is reflected in the use of advanced testing techniques, reporting methods and today's leading software testing tools.

Development Team

Our Programmer / Analysts have vast experience in developing applications in variety of client / server and web based, 4GL and Xbase development languages. Our Programmer / Analysts utilize such object-oriented development tools as Microsoft's Visual Studio .net to meet our customers needs. Our Programmers / Analysts expertise includes such interfaces and custom business applications with an emphasis on CUA-compliant graphical user interfaces. Our development team also leverages extensive expertise in the integration of EDI, bar coding, Internet, RF, time and attendance systems and PLC technologies into database environment.

Training And Implementing Team

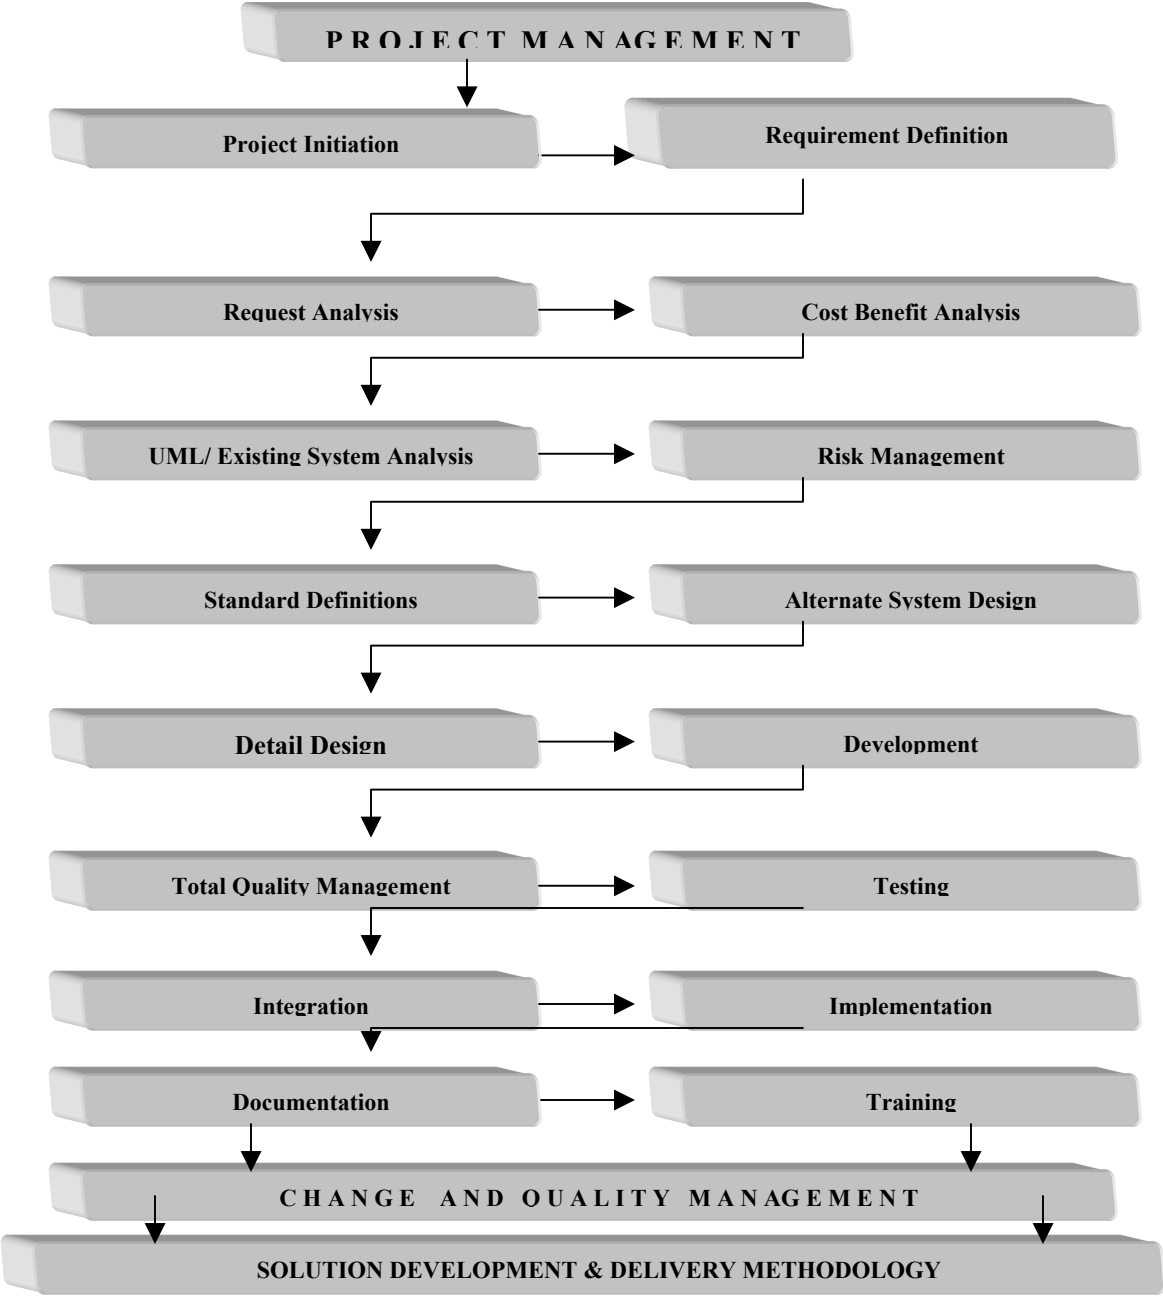

Our Training team has provided training and implementation expertise to business for many years in such areas as database accounting software, Inventory and Human Resources management software.

Technical Support Team

Our technical support team has been providing expertise to clients their complete level of satisfaction in such areas as database accounting software, Inventory and Human Resources management software.

Project Analysis, Design And Management Methodology

One of the inimitable processes we adopt in our project handling is Project Management. This technique is the core of any successful system development and implementation. The process flow is mentioned below to show the professional strength of our analysts.

Our Products

Accounts Information Management System

Accounts management is the most important part of any business activity. If the accounts and other financial matters are not smooth in an organization then the survival of the organization will always be on stake. For the management of financial activities the AIMS (Accounts Information Management Software) is a comprehensive solution that fits the requirement of most accounting needs from a small organization to a large organization. The accounting solution incorporates all functions of general ledger, Payable, Receivable and Controls. This solution collects all relevant data about the company's accounting activities, which provides complete and comprehensive information about the progress of accounting functions within the enterprise. Data from a full range of accounting components is tied up together offering a very high level of data integration and integrity. In this system you will have real time information all time with your own defined chart of accounts. Seven levels of accounts will give you the full control over major to minor activities, as well the transactions posted when the management want or when the transactions are verified. Multiple branches, companies can be handled under one umbrella. Three level of grouping of chart of accounts, which generate powerful reports for the management's decision making like Trial balance, Balance Sheet, PLS, Receivable and payables etc.

Inventory Management System

Inventory Management module for New Entrants and old inventory staff is designed to ensure that staff understands the methods and practices needed to minimize losses and maximize efficiency in the stores department. Practical and down-to-earth, its aim is to enable participants and implement what they have learned. In manufacturing inventory you have to keep track of each and every commodity either it is big or small. Our system is very comprehensive and procedure defined because it provides the key information to the management to take decisions for the further purchases of stocks on the basis of detailed analysis of price, materials or material groups, delivery information and price history. Items and suppliers are distributed categorically which eases the browsing / selection process for simple data entry and smooth documents to follow up. All the major required documents like Gate Pass, Goods Receive Notes, Invoices, Demand, Store issues and production sheets can be printed through this system, which reduces your stationary and printing cost quite remarkably.

Payroll and Attendance Management System

A powerful tool that would enable the organisation to collect, manage, calculate and report all your employees' data in one place. A human resources system for small to large sized organizations, simple to use, intuitively designed and capable of giving access to current, detailed compensation and benefits information for each of your employee as well as information on you're their complete applications record. Pay structures, EOBI, Social security, education cess, bonuses and deduction are very well taken care off in this system

Multi Level Marketing (MLM)

As we know marketing is simply a movement of products or services from manufacturer or producer to the end user via word of mouth marketing. Multi Level Marketing is different. Every one who sign-up is contracted to the company. They all purchase products directly from the company at the same price and receive their commission, bonus cheque directly from the company. MLM Manager Take Your Business Where It Dreams of Going, addresses all of the tasks and functions required to operate and manage a growing business in the direct sales industry. MLM Manager focuses on helping you achieve customer service excellence in the eyes of your field representatives. MLM Manager is the enterprise solution that handles your existing business needs and scales to manage a multi-billion Rupees global operation.

Hybrid OCR Manager (Optical Character Recognition)

Handling and managing of documents in shape of papers is very difficult to manage and very hard to find out any record. But new revolutionary technique of character recognition by the computers has made this job very easy. Hybrid OCR Manager helps you out in finding the documents on the basis of any textual criteria given to the software. The scanned documents will be saved in the system and then OCR Manager will give you the document on the basis of search criteria. It reduces your work beyond your imagination as far as documents handling and retrieving is concerned.

Gray Cloth Inventory Management

From looms the raw gray cloth is purchased and sent to the appropriate dyeing units. This whole process requires a perfect management because in this process many entities are involved. It involves dyeing units at which the stock has to be taken care off and like this some times stocks are at transporters stores needed to be taken care off. This system takes care off each and every single activity of this procedure.

Hybrid Organiser (Email Management)

Hybrid Organizer is a messaging and personal information management program that helps you manage your messages, appointments, contacts, and tasks. All the appointments and emails are always stored in a proper database so that at anytime these can be used for report generations. It is an email server and organiser to help you out for your daily email and tasks management.

Hybrid Call Manager

There are many benefits that come with utilizing a call management system, such as cost saving on your telephone usage, the ability to cost allocate expenses with departmental bill back, the ability to alert the system administrator of unusual activity that may be occurring in your system, and the ability to track your traffic patterns and line usage are just a few of the reasons why call management is a useful tool. But to fully understand these benefits it is necessary to understand what call management is and how it works. Random House has a wide variety of experience and wealth of knowledge to offer in communication. We are able to deliver value to you quickly, productively in high price-competitive framework. Secure all- inbound, outbound calls of your telephone exchange. Hybrid Call Manager is a system which enables you to monitor the inbound and outbound calls made through the telephone exchange of yours.

Contact Relationship Management

Customer service and support is vital in maintaining successful business relationships. Providing accurate and timely information in a professional manner is the key to any business operation. CRM (contact management) software increases the productivity of sales team while providing a reliable presentation of critical product and customer information. CRM database empowers you with the ability to create and manage virtually any number of marketing and sales campaigns.

The most important part of CRM is the uni-source of customer data. This does not mean that there has to be one physical database, but that there is one consistent view of customer, which should be accessible by all parts of the company.

Computer telephony integration

Computer Telephony is an industrial term for the integration of computer system and telephony devices, known as CTI. CTI software's primary purpose is to enable the company to control a telephony device inside an agent's workstation, or to control a shared telephony resource (i.e., PBX, telephony server, etc.) across a local area network (LAN) or even the Internet. This capability permits the company to separate the display/control interface from the telephone, and eliminates the need to buy expensive, proprietary telephone handsets to gain enhanced display and call control features. Additionally, a computer can display much more information, in a more self-explanatory fashion, than a telephone LCD display, so a company can employ CTI software to provide agents with more information, and more control over their incoming and outgoing telephone calls.

Interactive voice response (IVR)

Interactive Voice Response (IVR), which allows customers to use self-service applications. IVR systems are responsible for the voice processing functions of the incoming telephone call. The IVR is a software application that runs a script, which accepts a combination of voice telephone input and touch-tone keypad selection. The IVR's main function is to collect data from the caller via automated voice prompts, which the caller responds to via the telephone keypad, and provides appropriate responses in the form of voice commands. The caller is also prompted to respond to various options in a manner that caller understand well. IVRs should be programmed to only handle numeric data and responses to menu selections (such as 1 for Yes, 2 for No), which are entered via the telephone keypad. Examples of numeric type of data would be social security number, date of birth, date of last employment, etc..

Voice Mail System (VMS)

The voice mailing system is no longer just a message recording system. It is an important tool for running a successful business enterprise. Voice mail is the next best alternative to a face-to-face conversation.

Digital Call Recording (DCR)

Recording two-way conversations during a normal call process. All or selective calls to and from organization are recorded and stored for easy playback. Designed with completely modular structure. Four to several thousand channels. Total recording solution provides continuous recording of all conversations and over the phone transactions. This is the most reliable and secure method to ensure that absolutely nothing is missed. Schedule recording programmed to record only the time frame you want. Calls to be recorded can be selected by extension / station number, time, date, or other specified parameters. This solution can significantly reduce the recording load, enable easy management and maintenance of the calls recorded.

Agent / Campaign Management

Campaign Management software enables supervisor to handle Companies, Projects, Campaigns and Tasks / Assignments questions with ease. Contact Center managers can build decision-making logic into each campaign application. Supervisors can manage their agents with complete schedules for the assignments of future tasks in the context of their previously assigned tasks for different campaigns. In this system a call center's managers can efficiently handle different projects of their clients in a very well devised hierarchy.

Hybrid Mini Contact Center (HMCC)

This computerized answering machine lets you personalize greetings for the callers, organize information in phone books and record conversations. HMCC is a full-featured yet easy-to-use PC answering machine software using your voice modem. All necessary functions are supported: Caller ID lets you see and hear who's calling via screen pop-ups, digital call recording software, and caller's name announcement with speech synthesis. "Black" and "white" list functions filter calls based on caller ID database, call origin and other parameters. Tightly integrated voice modem with the sound card, HMCC offers a feature that leading competitors do not - real time voice transfer from telephone line to PC sound system, so you don't need an extra speaker attached to the modem! Runs as a tray application when idle, uses minimum system resources, and automatically frees the modem for an Internet connection. Lastly, HMCC looks just as great as it works! All is needed just computer linked to the telephone through modem.

Hybrid Mini Interactive Voice Response (MIVR)

HIVR utilizes your modem and Caller ID detection (also known as Calling Number Delivery) to identify incoming telephone callers. Caller ID is a service that lets you screen your calls, so you only answer the call when you want to. HIVR supports voice modem Caller ID systems. The program maintains a telephone caller ID database including custom sound alerts for a caller, as well as Picture and other caller's details. It provides a per-caller customizable ring alert sound and a pop-up window to notify you about an incoming call. Call can be accepted or rejected by you or by the program. You won't even hear rings from block-listed callers, once they are identified. The program is able to block unwanted calls, including blocked (private) numbers, out of area calls and those calls that were not identified. All is needed just computer linked to the telephone through modem.

Hybrid Caller ID System

HCID is a full-featured yet easy-to-use PC based Caller ID software for your voice modem. All necessary functions are supported: Caller ID lets you see and hear who's calling via screen pop-ups on your computer screen and caller's name, picture and announcement with speech synthesis. "Black" and "white" list functions filter calls based on caller ID database, call origin and other parameters. All is needed just computer linked to the telephone through modem.
